

# The Pitching Pad

## Instructions for Installation and Use

---

Installation: (The Pad can be attached to many structures, including fences, nets, or screens.)

1. Place The Pad against the structure of your choice, allowing The Pad's weight to be on the ground or floor.
2. Take the loose end of one of the straps on the top back of The Pad and weave it through the structure.
3. Bring the loose end back to the corresponding buckle and thread it through the bottom slot.
4. Then, take the loose end, turn it back through the top slot of the buckle, and pull snug.
5. Repeat steps 2 through 4 for the remaining two straps on top and for each of the straps at the bottom of The Pad.
6. All of the straps should be pulled snug before using The Pad.

Use:

1. The Pad is meant to be weather resistant, not weather proof. It should be removed after every session and stored in an area that protects against the outside elements.
2. The internal foam can absorb water. If found to be wet, the foam should be pulled out and allowed to dry before returning to use.
